Subject Index

absorption curve, 179
acetone solutions, 178
acetonitrile(AN), 13, 18, 177, 180
adiabatic calorimeter, 116
air/solution interface, 250
alkyl radicals, 205
alkylammonium salts, 109
amorphous ice, 85, 87, 89
anharmonic free energy, 286
approximate correlation function, 161
aprotic dipolar liquid, 18, 19
aqueous CsCl solution, 365
aqueous electrolyte solutions, 187
aqueous solution of NaCl at high pressure, 233
aqueous solutions, 91, 229
aqueous solvation, 31
aqueous sulfuric acid solutions, 305
argon, 329
argon/a-ice co-deposit, 88
Argand diagram, 181, 182
ascorbic acid, 187, 277
association constant, 177, 179, 184
average distances, 232
avian pancreatic polypeptide, 381
azobenzene, 65

benzene, 13, 273
N-benzylideneanilines, 65
biferrocene monocation, 397
bimolecular reaction rate, 321
binary soft-sphere mixtures, 121
bipyridine, 357
bi-exponential decay, 19, 20
Born-Mayer-Huggins, 373
bromide ion, 230, 245
Brownian motion, 75
butanol, 199
1-butoxyethanol, 199

calcium, 349
Car-Parrinello method, 373
carbonmonoxy myoglobin, 317
catalytic effect, 222
$CeCl_3$, 369
central component, 187
central force (CF) model, 139
CD, 213
CF_3H, 313
charged ion pairs, 184
chloride ion, 230
classical (continuum) model of solvent, 261
clathrate, 89, 118, 185
closest approach, 265
cluster form-factor, 87
$[Co(NH_3)_4(pzCO_2)]^{2+}$, 261
cobalt (III) ammine complexes, 237
coherent anti-Stokes Raman profiles, 169
Cole-Cole plots, 125
Cole-Cole type relaxation mode, 187
collective jump motions of atoms, 123
collective variables, 15
collectivity, 157
^{59}Co longitudinal relaxation rates, 273
combination reaction, 207
complexes of N-D-gluconylamino acids, 213
computer simulation, 329
condensation coefficent, 329
conductivity, 265, 357
configurational enthalpy, 120
conformational behavior, 313
conformational fluctuations, 65
contact ion pair(s), 177, 184
continuous random network, 87
continuum model, 385
coordination distance, 245
coordination numbers, 232, 245
correlated atomic diffusion model, 15
correlated motion coefficient, 127
correlation time, 433
corresponding state, 109
Coulombic phase separations, 108
cresyl violet, 41
critical behavior, 107
critical density, 425
crossover, 107
crystalline solids, 115
crystallization, 115
Cu(II) porphyrin complex, 231
9-cyanoanthracene-1, 3-cyclohexadine, 321

Debye type relaxation mode, 187

density autocorrelation function, 123
density correlation, 16
density fluctuations, 131
density functional (method), 16, 281
density functional theory, 131
density maximum, 86
density of state, 162
dependence of relaxation rate on the temperature, and the complex concentration, 273
dephasing, 131
dephasing constant, 169
detailed balance, 293
di- and tri-nuclear complexes, 253
diabatic free energy profiles, 8
dichrolomethane, 273
dielectric constant, 114
dielectric depression, 182
difference pair-distribution function, 233
diffusion coefficients, 333
diffusion constant, 17
diffusion controlled reactions, 184
diffusion mechanism, 429
diffusion-controlled rate constant, 207
diffusive Browinan motions, 65
diffusive motions, 65
N, N-dimethylformamide, 180, 229, 361
dimethyle suifoxide solutions, 227, 230, 178
dipolar and non-dipolar (polar) solvents, 7
dipole-dipole interaction, 409
direct correlation, 16
discrete-exchange model, 435
dispersion amplitude, 181
dispersion curve, 179
disproportionation, 205
dissipative structure, 341
dissociation pressure, 286
DLVO approximation, 139
double-quantum filter NMR, 434
dropping effect, 118
dye, 59
dynamic effect, 289
dynamic process in electrolyte solutions, 177
dynamic variables, 15
dynamical nonlinear terms, 297
dynamical structure factor, 15, 16
dynamical structure of water, 187
dynamics, 91
dynamics of solvation, 49
$d\pi - p\pi$ interactions, 253

effective dipole moments, 184
effective ionic radius, 358
effective volume of dipole rotation, 184
electric field gradients, 269
electrolyte solutions, 107
electron donors, 209
electron exchange rate, 209
electron transfer, 59
electron transfer reaction(s), 7, 205, 237, 345
electrostriction, 359
encounter pair, 321
energetics, 211
energy transfer, 405
enthalpy change of the ion association, 358
enthalpy relaxation, 120
entropy change of the ion association, 358
EPR, 213
erbium (III) ions, 230
evaporation and condensation, 329
EXAFS, 230, 245, 213
EXAFS oscillation amplitudes, 247
excess free energy, 357
excimer, 394
excitation energy migration, 393
excition diffusion, 393

$[Fe(CN)_6]^{4-}$, 261
femtosecond, 59
femtosecond time-resolved coherent Raman scattering, 169
finger-like structure flow, 341
first excited singlet, 417
first- order difference method, 230
fluctuation dissipation theorem, 18, 414
fluorescence quenching, 321
fractional exponent, 116
free energy profiles, 7, 11
free-volume, 325
friction kernel, 16
frozen-in systems, 115
FT-IR spectroscopy, 177, 313
functional derivative, 16

general susceptibilty, 123
generalized Langevin equation, 15, 289

generalized permittivity, 179
glass transition, 115, 126, 429
glassy, 91
glassy crystals, 115
glassy polymers, 325
glassy water and solutions, 231
D-glucose solution, 187
Gouy-Chapman-Stern (GCS) approximation, 139
Grote-Hynes theory, 65, 289
ground state recovery, 425

halogen abstraction, 205
hard-sphere liquid, 429
heat capacity, 118
heat capacity change of the ion association, 358
heat conduction, 417
heat transfer, 331
heavy water, 149
heterodinuclear metalloporphyrin, 221
hexagonal $ErCl_3$, 369
high frequency permittivity, 177, 179
high pressure, 365
homogeneous solvent, 18
homogeneous and inhomogeneous contributions, 389
homogenisation, 158
^1H relaxation, 269
^1H spin-lattice relaxation, 397
hydrated electron, 23
hydration, 91, 357
hydration entropy and enthalpy, 360
hydration free energy, 381
hydrogen abstraction reaction, 401
hydrogen atom abstraction, 205
hydrogen bond, 18, 91, 149
hydrogen carbonate, 349
hydrogen-bond connectivity, 89
hydrogen-bond formalisim, 409
hydrogen-bonded intermolecular structure, 305
hydrogen-bonded pair, 86
hydrophobic, 177, 357
hydrophobic complex, 359
hydrophobic interaction(s), 182, 357
hydrophobic structure-makers, 357
hyper-quenced glassy water, 87

inorganic reaction mechanism, 237
instantaneous normal modes, 157
integral equation method, 15
integral equation theory, 345, 377
integral motion, 20
interaction site model, 7
intermolecular, 169
intermolecular dephasing, 169
intermolecular interactions, 7, 169
intramolecular electron transfer, 397
intramolecular photodimerization, 325
ion association, 177, 357
ion solvation, 177
ion-aggregate formation, 177
ion-association theory, 360
ion-pair formation, 265, 358
ion-pair relaxation, 184
ion-pairing effects, 269
ionic atmosphere, 333
ionic products, 212
irrotational bonding, 182
isochoric temperature derivative, 86, 87
isolobal, 205
isomorphic replacement, 230
isotropic substitution, 99

Jones-Dole B coefficient, 365, 385

kinetic depolarization, 182
kinetic relaxation process, 184
Kohlrausch-Williams-Watts' equation, 116
Kramers theory, 65

Langevin-diffusion equation, 131
laser flash photolysis, 205
Lennard-Jones binary mixture, 377
LiCl solution in DMF, 232
light scattering, 113, 413
limiting molar conductivity, 265
linear response, 19, 261
LiNCS solution in DMF, 232
liquid, 91, 169
liquid acetonitrile, 235
liquid benzene, 393
liquid crystal, 281
liquid surface, 330
liquid-liquid phase separation, 107
lithium halides, 91
lithium iodide (LiI), 373
lithium ion, 229

local relaxation processes, 325
localization transition, 429
long time limit of the reaction, 75
low-frequency Raman scattering, 187

Marcus equation, 209
Marcus-Hush theory, 237
Markov limit, 16
MD simulation, 17, 229, 286, 329, 405
mean-field-like criticality, 107

volume of activation, 238

XANES, 230
X-ray, 305
X-ray diffraction, 91, 229, 361

α - peak, 123

α - relaxation, 123

β - relaxation, 123
